BAKER URGES BRIDGE NEAR PRESENT SITE

War Secretary Recommends that New Aqueduct Structure Connect Georgetown and Rosslyn.

Secretary of War Baker, after a personal inspection yesterday, recommended to Senator Clarke, chairman of the Commerce Committee, the construction of a bridge at or near the site of the present Aqueduct Bridge in order to furnish direct connection between Georgetown and Rosslyn, Va.

The Secretary, in favoring the site, asserted that the selection of a site at Twenty-seventh and H streets, or east of Thirty-fourth street, at any place, might prejudice or delay the execution of the plan to construct a memorial bridge across the Potomac from the Lincoln Memorial at Twenty-third street to Arlington National Cemetery.

The plan was accompanied by a recommendation prepared by Gen. William M. Black, chief of engineers of the army, reviewing the general question of bridges across the Potomac in this vicinity. Gen. Black also recommended the construction of a bridge at the intersection of Thirty-fourth and M streets, with a point in Rosslyn, near the existing bridge.

The association also decided to petition the Public Utilities Commission to make it unlawful for passengers to stand in the well of street cars with doors at the center.

The stationing of street car inspectors at Ninth and F streets, Ninth and G streets, and Ninth and New York avenue, to keep incoming passengers from entering before outgoing passengers have left the cars, was another method of preventing confusion and delay favored by the association.

U. S. HAS WEEK'S POWDER SUPPLY

Expert Says Army of Half Million Would Consume Nation's Output in Eight Days.

COUNTRY IS DEPENDENT

Seattle Delegate to Chemists' Gathering Says U. S. Would Be Practically Defenseless in Time of War.

"Modern warfare today means nitric acid. What use are men and guns without powder? Powder today has the significance in war that it never had before." These were the words of Henry J. Pierce, of Seattle, Wash., last evening in addressing the American Electrochemical Society at the Willard on "The Necessity for Water Power Development." "We are annually producing about 250,000 tons of explosives, valued at \$40,000,000, and we pay \$22,000,000 for the raw materials which enter into them, most of which are imported," he continued.

"In case of war, we would be almost entirely dependent upon foreign nations for our supply of nitric acid for the manufacture of powder and would be practically defenseless unless we could obtain it from them."

He continued that our present stock of powder would in time of battle last an army of half a million men only eight days.

At the morning session P. A. J. Fitz Gerald, the chemist in charge of the Fitz Gerald Experimental Laboratories at Niagara Falls, was elected president of the society, to succeed Lawrence Addicks, and a new committee, composed of the present and past president was created for the purpose of co-operating with the government.

Other officers elected were: C. G. Schluederberg, of Pittsburgh; A. L. Walker, Massachusetts Institute of Technology, and F. J. Tonne, of Niagara Falls, vice presidents; Dr. W. D. Bancroft, E. F. Roeder, and Carl Herring, managers; J. Richards, secretary, and P. G. Salem, treasurer.

One of the features of the afternoon session was an illustrated address on "Reclamation Service Water Power," by

Director A. P. Davis, chief of the Reclamation Service. Mr. Davis pointed out the importance of nitric acid, which had been emphasized by the European war, and the possibility of the Chilean supply being cut off at any time.

"The principal element needed for supplying the nitrates used in explosives and in agriculture, as well as many other electrochemical industries that might be developed in connection therewith," said Mr. Davis, "is a large amount of electric power. The United States Reclamation Service, in the construction of irrigation works, has on many of its projects a by-product in the shape of hydro-electric power." Some of these projects he pointed out, could be used in connection with extensive electro-chemical industries.

This morning's session will be held at 3:30 o'clock in the Red Room of the New Willard, while the meeting this evening at 8:45 will take place in the Mezzanine. At 1:45 o'clock there will be a steambath excursion.

The local committee on arrangements is composed of Dr. Allerton S. Cushman, director of the Institute of Industrial Research, chairman; William Blum, F. K. Cameron, G. W. Coggeshall, F. G. Cotrell, F. P. Dewey, John H. Finney, H. A. Gardner, Joseph W. Harris, Homer D. Holler, F. A. Holton, C. P. Karr, A. P. Leese, E. C. McKelvey, Charles L. Parsons, William J. Rich, A. D.
